I don't know if this has been mentioned before (or if this is the right forum to mention it), but when installing 705-dev2 on Windows XP SP2 the process for theide.exe is never stopped or killed. I've tried it on 2 different machines, one as admin and one as regular user, both SP2 boxes, and both times theide.exe was still showing in Task Manager after the installation was finished and everything closed.

It's probably not a huge issue, but it maybe should be looked into.

I know that but I thought it's only my machine (no body complained on dev1). I'll try to find out what the cause is.

Yes, this was a problem on my Windows as well (XP SP2).

In 705-dev3 it's working again . I'm not sure what helped - the new ide or SHOWNORMAL instead of 0 in WinExec function (MakeInstall2).

Can't find 705-dev3 yet on the download page. Is it coming soon?
