Is there a way to hide a single column in an arrayctrl?

Michael

Ok, solved it by using:

datagrid.ColumnWidths("0 1 1 1 1 1 1 1");

Or arr.AddColumn("column", 0) or better (if this column will never be shown) arr.AddIndex()

Ah, AddIndex() is much better. Thanks.

...note that the mapping between columns and indices can take various forms. Index can be visible in none, single or many columns, column can display one or more indices...
