Subject: Get data from arrayctrl

I use an SqlArray named datagrid to display some data.

When i double-click on a row, a second sql-query gets data from another sql-table.

Then i call datagrid.reset() to clear the SqlArray. After that i add some new columns to the SqlArray and fill it with the second sql-query.

Then i try to get data from the first Column like this:

datagrid.Get(datagrid.GetCursor(), 0)

But i always get the data of the first Column of my initial sql-query which was already overwritten by my second sql-query.

Confused...

Michael

So am I. Should work

If possible, submit testcase package please.

Mirek

Solved the problem by improving my code. Thinking about a problem and then thinking about code-redesign is always the best solution.

Thanks. Michael
