I'm using a String array:

String data[4];

data[0] = "string_0";
data[1] = "string_0";
data[2] = "string_0";
data[3] = "string_0";
data[4] = "string_0";

Now i want to use these Strings in another function:

a_function(data[]);

But i got these error:

error: expected primary-expression before ']' token

What's the right way to do it?

Michael

Solved...

a_function(data);

This will pass the complete array to a_function.

michael wrote on Thu, 24 May 2007 19:39I'm using a String array:

String data[4];

data[0] = "string_0";
data[1] = "string_0";
data[2] = "string_0";
data[3] = "string_0";
data[4] = "string_0";

use only data[0] to data[3] !!!! you created an array with 4 elements not up to 4 !

Bas

You're right. Thanks. It was only an example.

Michael
