I have recently added stock tango icons and some custom Tango icons into TheIDE and controls to improve the look and feel.

Attached is the diff.

Tango icons and its lookalikes are licensed under the Creative Commons Attribution Share-Alike license. For more info see "Terms of Use?" in here:

Attached is a sample screenshot. The screenshot does not show all the tango icons.

Wow! Looks very nice, maybe except the package icon. The most I like c++, h icons. It seems there's the time to make the ide more configurable... (it should allow to choose the icon set)

I have nothing making this default (if the license is OK - it most likely is).

Anyway, default for TheIDE. I would rather keep CtrlLib.iml as it is and override CtrlLib icons just for TheIDE.

(One reason is that I think CtrlLib.iml icons are much simpler and therefore pack to smaller size, which makes better default for small apps IMO).

OTOH, nothing against doing this as package that alters the CtrlLib appearance. Hmm, idea, just like we have "plugin/", what about to start another group "look/"?

The new images seem to make little difference to file sizes so far. But if it is a real concern, I could try to make the images smaller by using color palettes. The problem is IconDes may not store the image palette and use full color palettes instead.

However, I think there may be real concerns by users using 8-bit displays. What would you suggest to address this issue? There is no facility in UPP at the moment to select icons or images based on display bit depth.

The odd thing is that almost all toolkits I've used so far (e.g: Qt, GTK+, wxWidgets,..) only use 24-bit color icons for their toolbar images and message dialog icons. Probably 8-bit and 16-bit displays are a thing of the past?

AFAIK, TheIDE about logo is a 24-bit image.

Thanks,

Well, our take (since the beginning) is that supporting other than 24 bit colors in the interface is not worth the trouble, especially supporting palettes is useless (the notable exception here is Image export/import infrastructure, where it is still required).

It was true in 1999 when we started and it is even more true now

That does not mean U++ apps would not work, they do, just look worse. U++ sets some default palette and uses it.

I have made new package icons. Let me know if you find these better. See the attached image for the revamped package icons.

Well, pesonally, I like toolbar icons, but not the file/package icons. If nothing else, that shape for

package is "U++ logo" and is meant to be so

Another set of nice icons, under the Creative Commons Attribution 2.5 License:

<http://famfamfam.com/lab/icons/silk/>

It's a must-see if you're searching for clearness and easy-to-the-eye icons.

Some reactions ?

These icons are pretty nice as well. I could replace the Tango icons with this icon set as well. However, it pretty much depends on the core developers.

Maybe we should have a vote?

Cheers,

I don't like the new package icon as well, even more than original version .
As for making it configurable. That was my first idea. We could also ship theide with 2,3 default icon set to choose.

Mirek

I agree. I do not mind the original icon, so if one can choose or easily set a different set of icons is from far much better.

Luigi

I agree as well. I just thought that it's worth proposing different icons sets to make everybody happy, and to increase the user's freedom.

Hi,

I would like to know the consensus on the icons. I've recently tried out ActiveState Komodo and have noticed that they use the SILK icons for their toolbars and widgets. It is pretty nice and usable.

So what is it gonna be?

I really think that improving the icons will make it a lot more pleasant to work with and give it a professional feel.

Thanks,

I guess the consensus is to make it configurable.

All are only talks!!! can anyone do anything useful in here like making it in upp ide binary package ?
Newbies don't want advanced steps like compiling

Hi,

Newbies should use default look. There's no time for everyone preferences. Improving the look of TheIDE doesn't make anyone more productive.

OTOH, nothing against doing this as package that alters the CtrlLib appearance. Hmm, idea, just like we have "plugin/", what about to start another group "look/"?

Is any of this in the pipeline? Or how would it look like to be implemented (if it's not too much work I'm volunteering...)

I would like to use some (in my opinion) better looking icons in the RichEdit control without rewriting it complete myself. So someway to replace the default icons would be very welcome. Would the current CtrlImg and RichEditImg etc. classes become some wrapper which looks whether another 'look' is configured and pass through this image or return the default one? Any opinions? Or is there already a way to do this?

Best regards,

Martin

To follow up on this; is it possible to add a NullImage to the list of one uses the IMAGE_DATA construct.

E.G.

```
// Icon image
IMAGE_DATA(0x12, 0x13, 0x14)
// NullImage to indicate the default image has to be used
IMAGE_DATA()
```

I can't test the above code at the moment. Will try to do it soon.

Best regards,

Martin

Actually, replacing icons anywhere is already perfectly possible and easy as any iml image class has "Set" member, "Get" and "GetId".

There are even global functions able to list and address individual images in any iml. See the end of Draw/Image.h.
