---

I have 2 monitors that I use for coding and TheIDE really does not do a good job at accommodating this.

- Tool tips and popups show up on the first screen when I have the editor or assist++ editor on the second screen. This includes the code completion popups and the tool tips which show up on the edge of the first screen.
- There is no option to have multiple windows open; I would love to be able to have 2 files open, one in each window. Also, the window is limited to the size of 1 screen (though this may be some video option I can set and will continue to investigate).

I would love to see some improvements to accommodate multiple displays a little better.

Thanks.

- tooltips - confirmed, here too. (WinXP + 2007.1)
  - you can have multiple instances of theIDE open, it's not the same, but can be used as workaround to some extent.
- But allowing the Resize to go over both screens and then using split window would fix this too, so the fix to allow resize is certainly needed.
-
