Subject: Topic++ Mouse Text Highlighting [BUG]

There is an issue with Topic++ where there is an offset that occurs when I try to highlight text with my mouse when I am at a zoom level other than 100%. This only happens in Topic++ editor and not TheIDE editor. I can use the keyboard to highlight text just as usual, but when I try to highlight text with my mouse, it highlights text about 20 or so characters to the right of where my mouse is.

Edit: Changed Assist++ to Topic++
