Subject: How can I figure out how large to make layout for TabCtrl?

I'm having trouble figuring out how large to make the layout in order to fill the nest provided by the TabCtrl widget. Somehow I need to get this so I can use the layout editor to setup pages for TabCtrl.

My first thought was to make the layout page a different color so I could at least see how much geometry was used, but I couldn't figure out how to make the layout a different color.

Any help is appreciated.

It is the best, to strech your layout to have a fixed margin within its container (tab):
const int m = 4;
your_layout.HSizePosZ(m, m).VSizePosZ(m, m);
And it is a good idea to use your layout as a ParentCtrl child, like WithYourLayout<ParentCtrl>. So it will not have a different color than the tab.
