After calling NoWantFocus(), the needed behaviour would be to accept focus when clicking in the DocEdit, but to not accept using keyboard navigation (TAB).
Currently, it is unable to accept focus aon mouse clicks, so the control is not editable. Fix:
void DocEdit::LeftDown(Point p, dword flags) {
 //SetWantFocus(); //removed
 SetFocus(); //added

I think, LineEdit has the same problem.

void DocEdit::LeftDown(Point p, dword flags) {
 //SetWantFocus(); //removed
 SetFocus(); //added

I think, LineEdit has the same problem.

This is a very good point, but right now I am not sure it is OK (despite possible documentation).

Theory: If widget does not want focus, it simply does not want to get it by any user action (neither Tab or Click), end of the story...

(This does not mean I strongly agree with you, just I am not sure...)

You are right, but AFAIK, currently, all upp controls are working, as I described in my first post (except for DocEdit and LineEdit).

I think, this can be acheived using SetEditable(false) as well. Maybe the WantFocus name is not the best, something like WantKeyboardFocus would be better, but I think, this behaviour is needed. I use this for controls, I don't want to be in TAB sequence, such as buttons or some other controls in some special windows.

But a consistent behaviour would be good.

AFAIK, not true. Check ArrayCtrl::LeftDown, TreeCtrl::LeftDown etc...

The exception is EditField, where in fact it most likely should be fixed...

Uhh. These are not good news for me
Are there any plans to implement something like WantKeyboardFocus()?
