
Subject: How to predefine compiler wide macro from IDE?

(Sorry for newbie question but I couldn't find answer anywhere.)

Is there a way how to define a macro in IDE for certain compiler (all configurations) so it'll be passed down to the command line? My problem is: GCC on Win32 defines macro WIN32 while VC7.1/8 define macro _WIN32 and I do not want to complicate the code because of this.

(Since I do not know where to report bugs: external MingW 4.1.2 is installed without gdb.exe, TheIDE 2007.1 is installed w/o MingW, when I try to debug a successfully GCC compiled program IDE goes down with message "Error invoking gdb!" and then crash.)

/Pavel

To answer myself: it is in the Project -> Package Organizer. Strangely the settings for the main package are not reflected in the other packages. Oh well.

Strangely the settings for the main package are not reflected in the other packages. Oh well.

Why do you think it should?
