
Subject: does exist a HtmlToColor?

Hello,

with ColorToHtml() I obtain a color string useful while I create html page.
I would like to know if there is something that works in the opposite direction i.e. from code "FFFFFF" to Color(r,g,b). In fact I've such strings and I need to feed ColorPushers.
Even a HexToInt would be enough if exist, otherwise I'll write it.

Thanks,
Luigi

Routines you can use to convert from hex text string:

```
unsigned    stou(const char *ptr, void *endptr = NULL, unsigned base = 10);  
inline unsigned stou(const byte *ptr, void *endptr = NULL, unsigned base = 10) { return  
stou((const char *)ptr, endptr, base); }  
unsigned    stou(const wchar *ptr, void *endptr = NULL, unsigned base = 10);
```

```
uint64      stou64(const char *s, void *endptr = NULL, unsigned base = 10);
```

```
int         ScanInt(const char *ptr, const char **endptr = NULL, int radix = 10);  
int         ScanInt(const wchar *ptr, const wchar **endptr = NULL, int radix = 10);
```

(Use 16 instead of 10...)
