I think this is due to the refactoring of the DnD mentioned here as this definitely not happen with 705-dev3. The reversing of the calling order seems to trigger some sort of infinite recursion/loop that only ends when Windows runs out of resources and CreateWindow fails.

It is very easy reproduce, just add a PromptOK to the ColumnListDnD example like so:

```
void DropSum(int ii, PasteClip& d) {  
    if(AcceptInternal<ColumnList>(d, "mydrag")) {  
        const ColumnList& src = GetInternal<ColumnList>(d);  
        int sum = 0;  
        for(int i = 0; i < src.GetCount(); i++)  
            if(src.IsSel(i))  
                sum += atoi(~String(src[i]));  
        list.Set(ii, AsString(sum));  
        d.SetAction(DND_COPY);  
        list.SetCursor(ii);  
        PromptOK("Sum");  
    }  
}
```

This breaks a major application where I frequently use Prompts to get confirmation for Drag-Drops before completion (as they initiate a database update). So I would be grateful for a fix (Its a bit beyond me).

Cheers,  
James

Fixed. However, one problem remains - the arrow cursor keeps its D&D image override. Hopefully I will look into this later today....

Can't I just use

```
Ctrl::OverrideCursor(Image());
```

Thanks for the quick fix.  
James

Ctrl::OverrideCursor(Image());
```

Most likely yes, but it should work without such troubles...

OK, now fixed this too.

In fact, the fix was placing above into "Drop" handler
