Subject: Multiselect and contiguous cells in ArrayCtrl

Hello,

in an arrayctrl I've enabled multiselect rows. Selecting one row and then with SHIFT+arrow_UP or arow_DOWN I can select contiguous cells. I wonder if it is possible to select non contiguous cells. I was not able to do it.

I was not able to found a method that returns the indexes of the selected rows. I tried to scan the whole array and test with IsSelected(i) each row but without success.

Moreover it seems that the selection is lost when I open another windows. Is it normal.

Luigi

Quote:I was not able to found a method that returns the indexes of the selected rows.
this is working for me:

```
for(int i=0; i<m_array.GetCount(); i++)
{
 if(m_array.IsSelected(i))
 {
  DoSomething(...);
 }
}
```

Thanks, it works. But in my program something strange is happening. Now I'm playing with the ArrayCtrl package of the reference and I see that I can select even non contiguous cells with CTRL key while I'm not able to do it in my prog!
I need to investigate better...

 ***

In my prog each time a row is selected then the field are copied in some other ctrls. I suspect this break the continuity of the action performed on the arrayctrl so I can't use CTRL key to operate a non contiguous selection...

 ***

Yes, it is my prog and not the library. Even SHIFT key work Ok in multiselection mode.
