Hello,

How to move a row? (CTRL+UP/DOWN as in the arrayctrl provocate the crash of program)

Thanks,
Luigi

Last time I tried ctrl+up/down it worked. I'll see what's going on ASAP.

I'm using 2007.1. In contrast with the arrayctrl I'm not able to show the popup menu in which appear the move up/down.
I'm missing some option although I tried Moving and MovingRows in designer. In this case, if I press ctrl+up the program crush.

Luigi

Could you post a test case here? I have problems with repeat the crash.

BTW: Plese try 707-dev1 and let me know if there is the problem too

I restored proper reaction (swaping) for CTRL+UP/DOWN in select full row mode. In your case selecting cells action was called (it should not crash however). I made additional protecion but first I would like to see your test case as I wrote in the previous post.

Hi Daniel,

thanks for the answer. I'm currently far from my computer and I cannot realize the test. I hope to do it in August. Perhaps it is a problem already fixed in the new version. I'll inform you if it appear again.

Luigi
