Subject: asm int 3, abort();

```
#ifndef __NOASSEMBLY__
#if defined(_DEBUG) && defined(CPU_X86)
#ifdef COMPILER_MSC
 _asm int 3
#endif

#endif
#endif
#else
 write(2, msg, strlen(msg));
 write(2, "\n", 1);
#endif
 LOG(GetLastErrorMessage());
 abort();
```

better would be to use with MSVC:

Microsoft Specific
Causes a breakpoint in your code, where the user will be prompted to run the debugger.

<intrin.h>
void __debugbreak();

is similar to: __asm { int 3 }} on an x86 computer.

But will work with msvc8 x64, msvc8 ARM where asm int 3 will not.

Yes, just wanted to say I would rather made it x64/MSC and ARM/MSC specific....

If you can, please provide the tested (on x64 at least) patch.

Mirek
