Subject: upp602 beta [BUGS][FIXED]

I see multiple bugs in the 602 beta release.
1) Windows which should not be resizable can be resized by dragging a point near the window corner inside the status line. Reproduced with the Bombs example. See screenshot below.
2) HttpClient still logs in release mode
3) The /MAP linker option in ide.upp blocks compilation of TheIde with MinGW.
4) My multithreaded application no longer runs when compiled with this version. Edit: the error is not connected to being multithreaded, but is caused by a bug in ExStyle.
