Dear all,

I noted that everytime compiled application run, it creates ~/.<app_name> directory. How i can change this behaviour to not creating configuration directory?

JE

Do not use ConfigFile function...

(It gets used by a couple of other functions too , e.g. LoadFromFile)

Thanks Mirek.

But, i am only creating simple GUI application (using package CtrlLib). To what i know, i only following the GUI tutorial

Thanks again,
JE

I have re-check and yes, it will create `~/.<app_name>` for simple CtrlLib GUI application which I create with layout designer with one or two widgets.

Thanks,
JE
