How do I create a link to a post in an other topic? If I just copy the link from my address bar, that seems to contain some kind of session id (S=ad8d....) which could cause a problem. Removing it doesn't seem to result in a valid link.

Thanks for noticing. I've already started cleaning them. It seems that you should delete everything to the right including "&"

Please, check if it works.

Here is an example:

`http://www.arilect.com/upp/forum/index.php?t=msg&th=239& amp; amp;start=0`

Hold your mouse over it to see the real link or copy link location to play and study the syntax.

What I would like is a link which would scroll to a selected post from a thread, and not just the top of the thread. This one seems to work:

`http://www.arilect.com/upp/forum/index.php?t=msg&goto=65 7#msg_657`

Maybe each post could have a small link button from where I could copy links like this.

At last! I've succeeded to remove session ID from the URL's
Now you can link topics with more elegant url's.
Also, to make our forum more search engines friendly, I started one more template -
path_info_tmpl. I'll try to find out if that really
could help. Anyone here with extensive web knowledge?
