Deal all,

I see a lot of $ sign in ultimatepp.org's URL. What tools are used to produce?

Please advise,
JE

As far as i know, Topic++ is used to create this website. See manual ->
http://www.ultimatepp.org/appideTopic$en-us.html.

Thanks

So, we use topic++ like we use OpenOffice.org Writer and save to HTML document? Or it's kind of dynamic content like PHP?

JE

Close to the 1 case. Mirek uses a special app (in parallel with theide, AFAIK) which crowls topic dirs and generates web structure and things.

Personally, I have my own (still very messy in terms of programming) experimental (like UWord

from examples) app which generates same thing on the fly.

So, the web content is always regenerated each time?

About your project, Sounds cool to me Good luck with your project.

JE

Yes. I have an application that does complete full regeneration, using both CPU cores of my 2.7Ghz E4300, in 16s... Then it is compared to previously generated content (cached on my HD), and files that have been changed are uploaded to webserver.
