Hello,
I am having a small issue (but annoying) with latest version I don't remember I had before.
If I open the ide on a pc with 2 monitors, one with normal horizontal orientation, the other with vertical orientation, it opens on monitor1 which is horizontal one.
Now if I move the ide to the vertical one and click zoom button, the window does not expand to the full height of the monitor, but keeps the height of the horizontal one. Only width expands.
Any idea ?
Thanks.
Kbert.
