I need toggle buttons for my layout. I have a set of 6 buttons. Only one of six is pushed down at any one time.

Just like the switch class.

TheIde has a lot of potential.

Do you mean,
1. You don't like round switch buttons from the designer and want the same functionality but with square buttons?
2. You can't find the switch buttons with the right click in the designer?
3. You don't know how to make 6 from 1 and program them properly?

It is called OptionButton.

There is no .usc script for it yet, but you can add it to layout as "User class" (just type in the "OptionButton" and live with empty rectangle

Mirek,
Now, I'm confused. I don't have it in 2007.1.
From which version was OptionButton introduced?
Or did you mean ButtonOption?
