I haven't found ScrollArea control in U++, so I started playing...

```
#include <CtrlLib/CtrlLib.h>
struct App : TopWindow {
StaticRect
                 view, work;
Array<Button> obj;
SliderCtrl
                slider:
Label
               text:
//change count to change work area width
static int const count = 100;
static int const elw = 40;
static int const vw=500:
static int const ww = count*elw+50;
static int const wh = 290:
void Slider() {
 work.SetRectX(~slider,ww);
 text = \frac{1}{C6*} b + AsString(\sim slider);
}
typedef App CLASSNAME;
App() {
 view.SetRect(30,30,vw,300);
 view.Color(SBlack);
 work.SetRect(0,0,ww,wh);
 work.Color(SRed);
 view.Add(work);
 Add(view);
 for(int i=0;i<=count;i++){</pre>
  obj.Add(); obj[i].SetRect(5+i*elw,20,30,20);
  obj[i].SetLabel(AsString(i));
  work.Add(obj[i]);
 }
 Add(slider.BottomPosZ(5, 30).HSizePos(300, 300));
 Add(text.LeftPos(5, 200).TopPos(5, 40));
 slider <<= THISBACK(Slider);</pre>
 slider.MinMax(-ww+5, vw-5);
 slider <<= 50;
 Slider();
 Sizeable().Zoomable();
}
```

```
};
GUI_APP_MAIN
{
    App().Title("ScrollArea -v0.1").Run();
}
```

You can download my new version of ScrollArea. Nothing special but might be sometimes useful...

Unzip "here" into your packages dir.

Edit: this version with scrollbars.

Hi Aris,

I'm using your scrollarea. It is very useful in this moment because I'm trying to simulate a sort of arrayctrl where each row contains different widgets that can be manipulated easily.

Because I do not need a horizontal scroll I wonder if can be removed the horizontal bar.

Luigi

```
ScrollArea::ScrollArea()
{
    SetWorkSize(Size(1000,1000));
    AddFrame(sc);
    Add(work);

    sc.HideX(); //
// sc.HideY(); // ADDED uncomment to hide...

    sc.WhenScroll=THISBACK(Scroll);
// AddFrame(ThinOutsetFrame());
    AddFrame(ThinInsetFrame());
}

OK?
```

Here http://www.vegachess.com/en/vega5rr.htm, at the middle of the page, you can see your scroll area in action

Luigi

Which one?

It is the window "Modify Colors". In the worse situation I needed 500 pair of buttons and and relative labels and icons (they are simple icon in a label and not option image button). Perhaps the arrayctrl is enough to do it... knowing how to use it... but I found easier to attach them to the scrolling area. Each row is widget class.

Looks nice!

Hi,

I cannot get the zip file, I get an empty file when I tried to download it.

Can someone repost the file?

Thanks in advance, Benoit

Benoit

Edit:

P.S. I'm just not very sure if they are the same versions. But the idea is very simple.
