I haven't found ScrollArea control in U++, so I started playing...

```
#include <CtrlLib/CtrlLib.h>
```

```
struct App : TopWindow {
    StaticRect      view, work;
    Array<Button>   obj;
    SliderCtrl      slider;
    Label           text;
    //change count to change work area width
    static int const count = 100;
    static int const elw = 40;
    static int const vw=500;
    static int const ww = count*elw+50;
    static int const wh = 290;
```

```
void Slider() {
    work.SetRectX(~slider,ww);
    text = "\1[C6*/@b " + AsString(~slider);
}
```

```
typedef App CLASSNAME;
```

```
App() {
    view.SetRect(30,30,vw,300);
    view.Color(SBlack);
    work.SetRect(0,0,ww,wh);
    work.Color(SRed);
    view.Add(work);
    Add(view);
    for(int i=0;i<=count;i++){
        obj.Add(); obj[i].SetRect(5+i*elw,20,30,20);
        obj[i].SetLabel(AsString(i));
        work.Add(obj[i]);
    }
```

```
    Add(slider.BottomPosZ(5, 30).HSizePos(300, 300));
    Add(text.LeftPos(5, 200).TopPos(5, 40));
    slider <<= THISBACK(Slider);
    slider.MinMax(-ww+5, vw-5);
    slider <<= 50;
    Slider();
    Sizeable().Zoomable();
}
```

```
};  
  
GUI_APP_MAIN  
{  
    App().Title("ScrollArea -v0.1").Run();  
}
```

You can download my new version of ScrollArea. Nothing special but might be sometimes useful...

Unzip "here" into your packages dir.

Edit: this version with scrollbars.

Hi Aris,

I'm using your scrollarea. It is very useful in this moment because I'm trying to simulate a sort of arrayctrl where each row contains different widgets that can be manipulated easily.

Because I do not need a horizontal scroll I wonder if can be removed the horizontal bar.

Luigi

```
ScrollArea::ScrollArea()
{
    SetWorkSize(Size(1000,1000));
    AddFrame(sc);
    Add(work);

    sc.HideX(); //
    // sc.HideY(); // ADDED uncomment to hide...

    sc.WhenScroll=THISBACK(Scroll);
    // AddFrame(ThinOutsetFrame());
    AddFrame(ThinInsetFrame());
}
```

OK?

```

OK?

Yes, it is OK.
Thank you

Here <http://www.vegachess.com/en/vega5rr.htm> , at the middle of the page, you can see your scroll area in action

Luigi

Which one?

It is the window "Modify Colors". In the worse situation I needed 500 pair of buttons and and relative labels and icons (they are simple icon in a label and not option image button). Perhaps the arrayctrl is enough to do it... knowing how to use it... but I found easier to attach them to the scrolling area. Each row is widget class.

Looks nice!

Hi,

I cannot get the zip file, I get an empty file when I tried to download it.

Can someone repost the file?

Thanks in advance,
Benoit

Edit:

P.S. I'm just not very sure if they are the same versions. But the idea is very simple.
