Subject: Package Problem with Ubuntu 7.04

I'm just testing ultimate++ with Ubuntu 7.04.

The Installation went fine, but when i try to compile a project which i'm developing with windows i got a problem that none of the included packages like CtrlLib, Sql, SqlCtrl and MySql were found.

When i click on one of these packages there is no content within.

The Compilelog looks like this:
/home/michael/Backup/USB-STICK/Entwicklung/UPP/prohibisZA/mainwindow.h:10:29: error: CtrlLib/CtrlLib.h: No su
ch file or directory
/home/michael/Backup/USB-STICK/Entwicklung/UPP/prohibisZA/mainwindow.h:11:29: error: SqlCtrl/SqlCtrl.h: No su
ch file or directory
/home/michael/Backup/USB-STICK/Entwicklung/UPP/prohibisZA/mainwindow.h:12:25: error: MySQL/MySQL.h: No such f
ile or directory
/home/michael/Backup/USB-STICK/Entwicklung/UPP/prohibisZA/mainwindow.h:18:22: error: Draw/iml.h: No such file
or directory
In file included from
/home/michael/upp/out/prohibisZA/GCC.Debug.Gui.Main.Shared/$blitz.cpp:35:
/home/michael/Backup/USB-STICK/Entwicklung/UPP/prohibisZA/helpdialog.cpp:10:30: error: Core/topic_group.h: No
such file or directory

And when i click on my main-package to add a package i can only choose my own packages, not the upp-packages.

Anyone who knows the problem?

Search for the uppsrc directory on disks
(I think you are working from USB stick? the the USB-STICK/Entwicklung/UPP/ contains uppsrc or does you have it installed inside system (/usr/shared/upp ??? I'm not sure))

After you know where your uppsrc is, check the assembly settings (Set main package -> right click in left pane on your assembly with your application -> Edit Assembly -> Package nests should contain the USB-STICK directory *AND* uppsrc path too.
(like "C:\upp\examples;C:\upp\uppsrc")

... and another problem.

I have MySql-Server installed on my system and added this path into the Build-Method:

INCLUDE : /usr/include/mysql
LIB: /usr/lib/mysql

I get these errors when compiling my project.

mainmenu.cpp
In file included from
/home/michael/Backup/USB-STICK/Entwicklung/UPP/prohibisZA/mainmenu.cpp:7:
/home/michael/Backup/USB-STICK/Entwicklung/UPP/prohibisZA/mainwindow.h:12:25: error:
MySQL/MySQL.h: No such file or directory
/home/michael/Backup/USB-STICK/Entwicklung/UPP/prohibisZA/mainwindow.h:47: Fehler:

On my Windows-System i installed MySql-Server with Developer-Addons. What do i have to install on Linux to get this running?

just a guess:
mysql-server, mysql-client, mysql-common and libmysqlclient through synaptic

Just checked my installed packages, but they're all installed.

Another hint?
