the text of a Label cannot be displayed in a wrapped manner and cannot be set to.

so TheIDE's .lay editor lacks many attributes' editing abilities.

You can get "sohpisticated" labels by adding \1 at the beginning of it - then the rest is interpreted as QTF.

This way, you can even have tables and pictures in the label if you wish

does not work. 708dev1

ezcomm/main.cpp line 225. the \1 does not wrap it. when running, click "clear" in the lower right corner to test this.

info.SetLabel(cnt ? "\1this is a long line. hope it works"/*cnt*/ : "");

even if i write like below, it does not change a thing,

```
 char ss[100];
 ss[0] = 1;
 strcat(ss, "this is a long line. hope it works");
 info.SetLabel(cnt ? ss/*cnt*/ : "");
```

Ops... sorry... should be fixed now...

Quick fix: Replace attached files in CtrlLib.

709dev1 solves this but my characters are out of boundage as shown.
ezcomm is the project to display this. click the button CLEAR in the lower right corner.

Do you think it would be possible to post a *working* testcase?

#include "D:\work\MyApps\ezcomm\ezudp.h"

Fixed.

Anyway, the primary reason was combination of ALIGN_CENTER in .lay with "\1" QTF text. Maybe just make it ALIGN_LEFT

Mirek
by saying FIXED, you mean it will be fixed in the next release? or would i have to left-align it?

ALIGN_LEFT will help with current version.

In the next release, it is going to work with ALIGN_CENTER too.

solved in 710dev1.
but since i do not have any idea of QTF, how can i control the characters' appearance? after i display sth. using QTF, the .lay's color and font size information are overridden.
