Two bugs:
When mouse is hovered over a popup menu, the focus rectangle is displayed around the hovered menu item. This rectlangle should disappear when the mouse leaves the menubar area, but it does not.

The menu displayed by the TrayIcon example should disappear when another application is focused withouth choosing any items from the menu, but it does not.

I am totally puzzled by the TrayIcon problem - it looks like the cause is that Win does not bother to send WM_ACTIVATE message to U++....

I see that the MenuBar shown by TrayIcon is no longer a child window. Why is this? It did not really solved the problem of the menu remainig visible, but caused another: when the MenuBar is visible the taskbar shows an empty button for it. This should not happen for popup menus.

Oooops, looks like while trying to fix it, I damaged it even more

BTW, it never was child window. TopLevel Ctrls (or Win32 windows) are not child.

OK, the recent problem is fixed (but not the deactivate problem).
