Is anyone using 708-dev1 with Windows Vista?

I get these error when starting a rebuild:

c++.exe: installation problem, cannot exec `cc1plus!': No such file or directory  
What can i do to fix it?

Yes, something is wrong. I'll take a closer look at it before new dev. In the meantime a workaround

go Setup->Build methods->MinGW  
in section PATH - executable directories add  
C:\upp\mingw\libexec\gcc\mingw32\3.4.2  
if you installed upp in c:\upp  
It should work now.

Thanks Daniel, this error is fixed. But now i get another one:

Der Befehl "C:\Program" ist entweder falsch geschrieben oder  
konnte nicht gefunden werden.

C:\Program Files\UPP\mingw\bin\windres.exe: no resources  
prohibisZA: 12 file(s) built in (0:58.75), 4895 msec / file, duration = 63422 msec, parallelization  
5%

There were errors. (5:14.95)

Looks like it doesn't like the installation-path c:\program files\upp

This is the old bug of theide. Better move your instalation to the dir without spaces. I hope Mirek will fix it as only he comes back from vacation.

Ok, installed upp to c:\upp and now it works.

Thanks.

Interesting, I think " are added to the commandline... Could you please activate Setup/Verbose and post me the actual commandline?

What do you mean by "actual commandline"?

TheIDE is invoking external programs like compiler or windres.exe during the build process, with "commandlines" - equivalent of what you would type into command prompt if you would like to do that without TheIDE...

By activating "Verbose", TheIDE will print these commandlines into console. A great way how to debug build problems.

Mirek
