Any plans of implementing call tips in U++ IDE?

The completion for .method works OK, but what about completion for methods/function args?

Thanks

What the difference would you like to have?

I mean: Assist++ works for classes and structs from Ultimate++ library.

But if I want code completion and call tips for external .h file, like windows.h or winsock.h for example, I can't get the code completion.

I really won't need Windows API, because U++ is already a full GUI framework. But if I want to install other library, for example, it would be nice if the parser could provide completion for other external functions and methods too.

If we already use Thelde exclusively, because it manages package dependecy for us, it would be great if Thelde turned into a complete substitute for Visual Studio IDE, providing these missing details.

If Thelde already has this could you please point me how to enable it?

Thank you.

I see. Yes, we are aware about this problem and it is likely that improved parser will bring an improvement here as well.

The real pro	oblem here	is that so t	far, parser	ignores	macros.	That makes	parsing o	of win32	API
headers im	possible
