Hi!
I have small experience in C++, but ...

```
class ABC: public TopWindow
{
    bool blink;
    void ChangeBilnk1();
    void ChangeBilnk2();
    ...
}
```

```
// ABC.blink initalized with "true" - !!! I was wrong !!!
```

```
ABC::ChangeBlink1()
{
    blink = !blink; // 'blink' NOT change value;
}
```

```
ABC::ChangeBlink2()
{
    blink = (blink ? false : true ); // 'blink' change value
}
```

Is it a bug or Am I wrong?

I'm Sorry!
variable "blink" was not been initalized.
After setting "blink = true", bug is disappear.

Sorry.
