(Ctrl\_Shift\_F) Find searches not the package but also dirs and subdirs files (which are not included in the package). BUG?

A feature. In fact, I often use it to search even non-U++ files...

Me, too. I even have created my own system of my archlinux configuration packages (fake \*.upp) and use theide like MS Windows ControlPanel.

But... maybe one day this search feature could become switchable, then? Or even with multi-selectable files? And/or "search within results"? Not the highest priority, though...
