hi there,
for simplicity reasons i put them in my wiki:
(do not worry, it's all creative commons :)

http://abductee.undergrund.net/wiki/index.php?title=TheIDE_Highlighting

http://abductee.undergrund.net/wiki/index.php?title=Context-based_Comment_Visibility

these are features i would really really really really like to have.
both of them should not be that hard to implement, judging by the existing code-base.
also:

- configure completion on Tab
- alphanumerical values in the colorpicker

otherwise it is already a really really cool IDE.

p.s.: my next posting will be about how code-completion should behave.
