hi there,

for simplicitity reasons i put them in my wiki: (do not worry, it's all creative commons :)

http://abductee.untergrund.net/wiki/index.php?title=TheIDE_H ighlighting

http://abductee.untergrund.net/wiki/index.php?title=Context- based_Comment_Visibility

these are features i would really really really like to have. both of them should not be that hard to implement, judgeing by the exsisting code-base. also:

- configure completion on Tab
- alphanumerical values in the colorpicker

otherwise it is already a really really cool IDE.

p.s.: my next posting will be about how code-completion should behave.
