Subject: How to define the width of a table?

Hi,

Sorry for that basic question, but I didn't find a way to specify the width of a QTF table in a report. By default the table is spread over the whole page.

Thanks in advance,
Benoit

You can define the space on left and right size.

<number
>number

U++ RichText does not support fixed width of table column (yet?). If you need one, you need to use column ratios to achieve it. (In reality, as long as you need just "document" precision, quite easy to do by try/error approach).

Sometimes a trick could be to do what you want in T++ and then copy that from the generated .tpp file to your C++ program.

Actually, I plan to add some sort of "Qtf studio" in TheIDE...
