I am new to U++, and I would like to know if there is any book printed covering getting started/programming/advanced programming with U++.

Or if there are any plans to write one.

Tahnks, and best regards

What a nice thing it would be! Alas, at the present moment there is none. Must say online manual is starting being quite complete, though.

IMO, although there are plenty of useful examples, they should be more commented.

Ciao,
