Hi !

I just want to know whether Farsi (Persian) is supported by Ultimate++ and if someone has already experience with it.

Thanks,

fonso

Now, you are the first asking.

Is Farsi RTL or LTR language? What are the details?

Persian (Farsi) is an arabic language type. Therefore RTL.

You can find a very good and detailed description in

<http://behdad.org/download/Publications/persiancomputing/a007.pdf>

There are several pages with detailed description of the problem.

Interesting. 4 years we have not been impacted by RTL, now we have two RTL demands in 2 weeks

OK, I guess we have some work to do now

But do not expect this for 2007.2 release. Will take a lot of work to happen...
