Subject: A question about packages

I'm makina a small app that converts an existing library (OpenCASCADE) to TheIDE package format, separating modules and so.
As the lib is huge (15.000+ include files) this can't be done by hand in short time.
The question is about UPP files and package usages :

If package A uses package B and package B uses package C, do I need tell package A (in his UPP file) that he uses package C or is done automatically ? In tha latter case I'd avoid to make an huge recursive scan of all include files....

Regards

Max

Thanks.... I rode something about 'packages used directly OR indirectly', so the question.

Ciao

Max
