Subject: LineEdit and WhenLeftClick

Hello,

Unfortunately WhenLeftClick is absent in LineEdit and I do not know how to wake up a method to process a row in the LineEdit after a click on it. Any suggestion?

Perhaps I should use an arrayctrl as container for the text...

Thanks,
Luigi

I've addressed the strings to an arrayctrl where leftclick is present and the problem has been resolved.
Anyway the leftclick could be useful in lineedit too.

Luigi

Well, you can add LeftClick to any widget by subclassing and overriding LeftDown - only do not forget to call the subclassed method too...
