..... doesn't work on Ubuntu.... Does it overlap with some system key, maybe ?

Ciao

Not unlikely... But it should in the list of redefinable keys.

Hello Mirek,

I just evaluating the UPP on Ubuntu 12.04 (version 5485-precise-i386).
I'm not able to Search word in Help Topics with CTRL+F1.

For example in "Main.cpp" tab I select TopWindow word,
then I press CTRL+F1 but TheIde open the "Help Topics" tab
with the last consulted help argument.

I've tried to redefine the key in Setup>Keyboard shortcut but neither
CTRL+SHIFT+F11 nor F12 nor CTRL+F12 work as expected.
So I suspect is not a matter of system key overlapping.

Can you geve me any hints?

Thank you for developing and supporting UPP,
for me a very promising framework.
Ciao.
Alberto
