Subject: Strange behaviour of the query option of TheIDE
Posted by Oblivion on Sat, 29 Sep 2007 17:17:42 GMT

Hi,
The query option is acting wierdly. Sometimes it reads the selected header and,sometimes it does nothing (I've tested on U++ headers too). Is there a bug or could it broken? I'm currently using 709-dev1 , but it was all the same with 708dev-b2.

And I have one more thing to ask. When I doubleclick on the classes of the query pane (when it works well), it lists the methods/members of the class, but I can't go back up to the namespace. there is nothinh like "go up" or "go back" button/menu. Is there a way to do that? I'm tired of querying again and again, just because I can't go back one level up in the namespace.

What do exactly mean by "going back one level namespace"?

I mean I can't go back into global namespace. Is there a ctrl key for this:

When I doubleclick on, let's say ::DockableCtrl, I can't go back to global namespace.

Well, first of all, you do not need to double-click it....

Other than that, right now I am a bit reluctant to improve this. I feel that the whole concept should be refactored. I plan to make this the main goal for the next 6 months...
