Subject: Crash on LoadFromFile Posted by Mindtraveller on Mon, 01 Oct 2007 01:54:39 GMT View Forum Message <> Reply to Message

Proceeding with U++ usage led me to another strange moment, which I couldn't solve with docs&forum search.

Loading config in a closest to examples manner, crashes application with assert in debug mode:

May be I'm doing something wrong, but I don't see any difference between my code and docs-how-it`s-done-right: #define CONFIG_FILE "config." struct Config wxBaud baud; wxParity parity; int com; wordlen; int stopbits; int int addr: void Serialize(Stream& s) s.Put(&baud, sizeof(baud)); s.Put(&parity, sizeof(parity)); s % com % wordlen % stopbits % addr; } **}**; Config config; void Kran::LoadAndInit() if (!LoadFromFile(config, ConfigFile(CONFIG_FILE))) config.baud = wxBAUD 38400; config.com = 1; config.parity = wxPARITY NONE; config.wordlen = 8; config.stopbits = 1; config.addr = 1; This code causes assertion in LoadFromFile.

Could you please help with this?

This code causes assertion in LoadFromFile.

Could you please help with this?

You cannot Put (in Serialize) when LoadFromFile...

The issue is a little bit complex, but the quick fix is to use SerializeRaw instead of Put (that will provide raw binary load if loading and raw binary write if storing).

Mirek

Finally I've got it, yes, SerializeRaw solved the problem. Looks so easy when it's done. Certainly, need to get used to U++.

Thanx again.
