Well, after running this code, the only way out is hard reset as system (Vista64, 2Ghz Core2, 2GB RAM) becomes totally unresponsive...

```
int main(int argc, const char *argv[])
{
    for(int i = 0; i < 100; i++) {
        printf("0x%llX\n", (long long)malloc(1000));
        printf("0x%llX\n", (long long)malloc(100000000));
    }
}
```

Not a nice first hand experience...
