Results of new release mode optimization model:

MSC8

UWord optimal : 1495040
UWord size: 1449984
UWord speed: 1728512

TheIde optimal: 4743168
TheIde size: 4689920
TheIde speed: 5378048

MINGW

UWord optimal: 2015232
UWord speed: 3076096
UWord size: 1871872

TheIde optimal: 6180864
TheIde size: 6000640
TheIde speed: 8675328

"Optimal" should have 99% of speed of "Speed" (it compiles only explicitly marked bottleneck files optimized for speed and rest for size).

Hi luzr,

I'm interested in those #'s, but I have no idea what they mean. What are the units on those #'s? Are they milliseconds?

Thanks.
