If we call Resizable(), the form will be resizable in both x and y directions. But sometimes, we just need the form to be stretched horizontally only, so how can this be done? Thanks

Anyone would be kind to help me with this? Even if telling me that "no, it can't be done" is a great help so I won't have to keep chasing the problem. Come on guys, this is a legitimate question. So please help, because who knows, there might be others who want to know the same thing. Thanks

Oops, I was typing and didn't see that Mirek responded. Sorry Mirek and thanks.
