[View Forum Message](#) <> [Reply to Message](#)

Hi,

I'm looking for a simple way to convert my topics (help-pages) to html.

I've seen that the manual pages in ultimatepp.org are made with U++ (content tag). In Richtext-Package have found the html encodig, but it is to complicated for me.

Can someone show me a way.

Thanks in advance,

Alex

Something like

```
Index<String> css;
String h = EncodeHtml(ParseQTF(qtf), css, VectorMap<String, String>(), VectorMap<String,
String>());
DUMP(h);
DUMP(AsCss(css));
```

Should get you started....

Mirek

First, thank you!

It looks *not* simple (for me), but probably the best if I do so, because c&p over MS-Word or Openoffice looks terrible.

Alex speaks with itself

It looks *not* simple (for me), but probably the best if I do so, because c&p over MS-Word or Openoffice looks terrible.

Hi,

maybe it is for someone interesting. I have built in my program a menuitem (only in debug mode) from where I can create all html-files from topic-files, for easy updating my online help files. I think it is not yet perfect, but it works .

Here are a little sample:

<http://www.pdservice.de/upp/Topic2Html.zip>

Hello captainc

The zip file exists but is empty.

Alex, could you put the file again to try it. Thank you.

Best regards
Koldo

I have a copy of this file so I put it as an attachment.

(to Forum administrators - I hope the size of the file is acceptable)
