I've just installed Ultimate++ with MinGW. I'm running Windows Vista and installed it to my D: drive.

Is there anything else that needs to be done for configuration purposes.

For the first tutorial, Core01, a console application, running the debugger only tells me things like this.

Quote:uncompr.c

c++.exe: installation problem, cannot exec `cc1': No such file or directory

...

plugin\z: 14 file(s) built in (0:00.13), 9 msecs / file, duration = 280 msecs, parallelization 97%

There were errors. (0:00.37)

The 'console' option is selected from the 'Debug / Run Options' menu.

Sorry for what is most likely the most basic of questions. Any clues please.

In the light of day after a good night's sleep I've found the answer repeated below anyway:-

Quote:Yes, something is wrong. I'll take a closer look at it before new dev. In the meantime a workaround Smile

go Setup->Build methods->MinGW

in section PATH - executable directories add

C:\upp\mingw\libexec\gcc\mingw32\3.4.2

if you installed upp in c:\upp

It should work now.
