Hi all,

How to format, during creating or not, the language of the SQLite database?

In my app I set the language using OS language like this:

```
GUI_APP_MAIN
{
    ...
    ::SetLanguage( ::GetSystemLNG() );

    theApp.Run();
}
```

If I insert PT chars in a database field thos chars are not recorded:

```
PromptOK("Erro a executar o update!");
```

When I read from the table I just see the
"Jo" and nothing else:

```
SQL.Execute("select * from groups");
while(SQL.Fetch())
    Exclamation(Format("%d - %s",SQL[0],SQL[1]));
```

Thank you very much

Alex

Done!

What happened was that if I insert portuguese text comming from an edit boxe the characters were written ok but if I insert static text (from the theIDE editor) in the database the text get wrong

charset. So do not forget to set the character set of the theIDE editor!

Setup|Environment|Editor|Default charset

Alex
