---

I made some patches / files added to :

- 1- Support X11 windowed controls (DHCtrl for X11)
- 2- Allow DHCtrl (only for X11 by now) to host childs as normal controls
- 3- Made X11 OpenGL control derived from newly created X11 DHCtrl for more consistent coding, plus some advantages.

Here are the patched files from 2296 today UVS release.  
Files included in zip are :

CtrlCore.zip    Patched core files + added X11DHCtrl.cpp  
GICtrl.zip      Patched GICtrl control

TestOpenGL.zip    Test file for both X11 DHCtrl control and new OpenGL control.

TestOpenGL.png    Screenshot of the demo

The demo shows a main window with inside an OpenGL control, a windowed panel with mouse coordinates on top of it and a kind of aerial view (another OpenGL control on top of first one). For the moment, the demo is only for X11, aka Linux. If the patches are accepted I'll complete it with a Windows version.

Technical note : the most work of all that was in CtrlCore packages, as UPP didn't allow windowed controls as child controls, i.e.

`if(parent == NULL) ==> the control has NO window handle`

That leaded to the mixed use of "parent" and "top != NULL" for the tests if a control has an handle; more, "top" structure was unioned with other pointers used only in child controls. Thus I had to separate 'top' from union and check all uses of 'parent' member to check if a control has handle and replace all with a check on 'top' member.  
Quite all the work already done should be ok for windows version too, with only some more patches to apply.

Code is fully commented, so it should be self-documenting.

Ciao

Max

New version (some bugs corrected of the control.

The zip file here contains a diff file (X11DHctrl.diff) that must be applied to core classes.

In UPP main folder (NOT in uppsrc subfolder) copy the X11DHCtrl.diff file and do :

```
patch -p0 < X11DHCtrl.diff
```

Patched files are :

- CtrlCore/Ctrl.cpp
- CtrlCore/CtrlCore.h
- CtrlCore/CtrlCore.upp
- CtrlCore/CtrlDraw.cpp
- CtrlCore/X11Proc.cpp
- CtrlCore/X11Wnd.cpp
- GLCtrl/GLCtrl.cpp
- GLCtrl/GLCtrl.h

Plus an added file :

CtrlCore/X11DHCtrl.cpp

Inside zip file is include a demo; just create a folder in MyAppS named TestGL, unzip TestGL archive into it and compile in TheIDE.

As before, the files are \*only\* for X11 version.... Win version coming soon !

Files are patched from the latest 2304 Uvs devel code.

Ciao

Here the latest release, made on UVS2 2311 version.

The zip file contains :

CtrlCore.zip    patched core files

GLCtrl.zip    patched GLCtrl files

TestGL.zip    a demo with new OpenGL and X11 DHCtrl controls

I can't put the OpenCASCADE demo, as it requires too many libraries. If someone is interested on it, I could setup the repo of patched OpenCASCADE source files and libraries for Ubuntu Feisty.

Ciao

Hello Max

I would like to try your OpenCASCADE demo.

Is it possible now?

Hello Max

I would like to try your OpenCASCADE demo.

Is it possible now?

Hi Koldo

It's a really long time I don't do anything with Opencascade.... it should run anyways, but you've to download and install opencascade stuff, and that's not so easy.....

Hello Max

If I download and install OpenCASCADE do you upload your DHCtrl?

I cannot sleep remembering your screenshot

Hi Koldo

Sorry for delay answering, I'm quite busy on these days....

DHCtrl is since long embedded in upp.... also on linux side.

IIRC somebody did some mods on it, so I'm not sure it works exactly as before....

I'll put here my opencascade demo, but...

1) I did a lot of work on Opencascade tree, it's ugly like it is and almost unmanageable, having a bunch of thousands include in a single folder, making it awfully slow to compile.  
I've somewhere an Opencascade re-packer, which separates includes by category in subfolders, but I don't remember how it works

2) You must put the patched opencascade tree inside an upp assembly.

So, if you've (a lot of) time experimenting with it and you're brave enough, I'll put here also my opencascade reformatters/packers, but no time to remember on how to use them and not sure at all if they worked or where in unusable state... sorry

Last thing I was trying to do was to put ALL opencascade lib into an own namespace, but it's so badly written that it's an hopeless task. So, be prepared to name clashes, and, BTW, blitz do have problems with it, of course.

Here the demo, on next post the (hopefully working) opencascade reformatter. Remember, take out the namespace stuff, it won't work, that's for sure

Ciao

Max

koldo wrote on Wed, 23 June 2010 22:57 Thank you Massimo for your effort

I have got them. We will see if I get something or not .

It's not too difficult, you could also use original opencascade install, but it's slow compiling and a bit uncomfortable to handle..... and you should also patch my demo.

IIRC the demo uses includes for the "librarized" version of OCC.

One of 2 upp apps I gave you does the separation of include files in a bunch of subfolders, and that one worked good.

After running the "librarizer" you should have something like this in your dest folder :

/home/massimo/sources/uppdev/OpenCascade/ApplicationFramework

/home/massimo/sources/uppdev/OpenCascade/DataExchange

/home/massimo/sources/uppdev/OpenCascade/Draw  
/home/massimo/sources/uppdev/OpenCascade/FoundationClasses  
/home/massimo/sources/uppdev/OpenCascade/ModelingAlgorithms  
/home/massimo/sources/uppdev/OpenCascade/ModelingData  
/home/massimo/sources/uppdev/OpenCascade/Others  
/home/massimo/sources/uppdev/OpenCascade/Visualization  
/home/massimo/sources/uppdev/OpenCascade/WOK

As you seem the includes are spread in a folder hierarchy, much easier to handle and muuuch faster for the compiler.

Then (IIRC) you should add the lib to linking libs (it should already be there in the demo, just check paths).

Of course, the OCC lib must be built....

Looking deeper, the "right" package should be LibCascade. It splits the library in subfolders AND creates an UPP package to build it. Don't remember anything else....

Hi Koldo,

here an opencascade demo which works with opencascade libs on ubuntu repository.  
Just install all opencascade-dev stuffs and run the app.

Due to changes in DHCtrl for linux, now it's not possible anymore to have a control embedded on a DHCtrl window (no windows controls in native windows, as it was before my patches, sigh....), so I had to simplify the demo.

Anyways.... run the app, zoom with mouse wheel, pan clicking the middle button, rotate view with ctrl+shift+mouse wheel.

Tested only on ubuntu 10.04, I guess it'll need some small changes for windows, but not sure.

Ciao
