hi,

I am trying to have a region defined window in winXP.

Using the win 32 method i did the following:

1) added the below code in the constructor of TopWindow class

```
HRGN window_region = CreateRoundRectRgn(
    0,    // x-coordinate of upper-left corner
    0,    // y-coordinate of upper-left corner
    224,  // x-coordinate of lower-right corner
    489,  // y-coordinate of lower-right corner
    20,   // height of ellipse
    20    // width of ellipse
);
SetWindowRgn(GetHWND(), window_region, TRUE);
```

but the resultant was no change just same old rectangular window, is there any thing wrong here and also is there any native way in U++ for region defined windows??

regards,

    0,    // x-coordinate of upper-left corner
    0,    // y-coordinate of upper-left corner
    224,  // x-coordinate of lower-right corner
    489,  // y-coordinate of lower-right corner
    20,   // height of ellipse
    20    // width of ellipse
);
SetWindowRgn(GetHWND(), window_region, TRUE);
```

but the resultant was no change just same old rectangular window, is there any thing wrong here and also is there any native way in U++ for region defined windows??

regards,

ok found the problem, i had set the region before setting it to popup style ... this would have over written the previous setting and hence no effect of the region.

all problems solved here ...
