Hello,

Size a column so, that the last character of a string is hidden.
The little arrow will appear and indicate more text.
But if you move the mouse over it, the DataPusher(?) will not pop up.

Well, usually it does. Cannot say more without the testcase...

Sorry, I thought that image and description are enough to show the problem.

So, here is a testcase.
I am using the Ultimate++ 711-dev2 Version.

Greetings loki

Thank you, bug in U++, fixed. (You was lucky enough to hit single exact width of column where it failed to work properly).

Quick fix:

```
Rect ArrayCtrl::GetCellRect(int i, int col)
{
 Rect r;
 r.top = GetLineY(i) - sb;
 r.bottom = r.top + GetLineCy(i);
 int x = 0;
 for(i = 0; header.GetTabIndex(i) != col; i++)
  x += header.GetTabWidth(i);
 r.left = x - header.GetScroll();
 r.right = r.left + header.GetTabWidth(i) - vertgrid + (col == column.GetCount() - 1);
 return r;
}
```

Thanks for fixing. Now it works correctly. By the way I noticed an other nice feature of the IDE and UPP. "The direct Access to UPP-source from within my own Project." I really like this!

Greetings loki
