Subject: ArrayCtrl and Menus switching

Hello,

I would like to switch some menuitems in dependence from the selections of a ArrayCtrl.
Means: when a row is selected, the menuitems should be enabled and when not, they should be disabled.

I have tried everything possible, but nothing works in that way.

Thanks,
Alex

So simple, if you know it.

First:

```
 ArrayCtrl TeList;
 ...
 TeList.WhenCursor = THISBACK(SetBar);
 TeList.WhenKillCursor = THISBACK(SetBar);
```

Second:

```
void CalClient::FileMenu(Bar& bar)
{
bar.Add(TeList.IsCursor(),"Drucken",Images::TerminDruck(), THISBACK(DruckTermin));
 ...
```

There are many examples in the source, but I have not found this, and so I have to agonize .
Maybe not a bad idea to make a FAQ (or a "How to do ...") like this:
http://leonardoce.interfree.it/leowiki.html
